======================== 8 failed, 3 passed in 6.70s ========================
```

Step 5: Fixed processor.py Output

```
==== Running calculate_dimensional_weight ====
Enter dimensions LxWxH in cm (e.g. 20x30x10): Invalid dimensions: enter three positive finite
numbers, e.g. 20x30x10.

==== Running format_tracking_label ====
Enter raw code (e.g. E123): Invalid tracking code: enter one letter and 1-6 digits, e.g. E123.

==== Running parse_package_manifest ====
Enter manifest JSON (e.g. {"weight": 12.5}): Invalid manifest: supply a JSON object with a finite
nonnegative weight.
```

Step 6: Passing Test Cases

```
